European ETF Dashboard

Complete Findings Summary — Morningstar 9,495 ETFs | Power BI Analysis

#	Question	Key Finding	Visual
Q1	**Most Popular Category**	US Large-Cap Blend Equity (~615 funds) dominates even in a European database. European investors heavily seek US market exposure. Bond ETFs (EUR/USD Govt) also well represented.	Bar Chart
Q2	**Average Morningstar Rating**	Average rating = 3.27 out of 5 across all ETFs. Classic bell curve — 3 stars most common (~1,500 funds), 5 stars rarest (~500 funds). Confirms Morningstar's balanced distribution.	Gauge + Bar Chart
Q3	**Highest 5 Year Returns**	WisdomTree Nickel 2x Leveraged topped at 156% — but these are high risk leveraged funds. Among normal ETFs, iShares Dow Jones Global Titans 50 led at 16.99% with just 0.51% cost and 5 stars.	Table Visual
Q4	**Cost vs Performance**	After fixing Sum→Average, trend line sloped clearly downward. Higher cost = lower returns. Every 1% increase in ongoing cost correlates with meaningfully lower 5 year returns. Cheap index funds win.	Scatter Plot
Q6	**ESG Score by Category**	Sector Equity Precious Metals scored highest (~37). Russia Equity surprisingly in top 3 — pre-2022 data. ESG scores are not standardized — methodology had counterintuitive results in 2020.	Bar Chart
Q7	**ESG vs Performance**	Trend line sloped downward — higher sustainability score = lower 5 year returns. ESG funds excluded oil/tobacco/weapons which performed well 2015-2020. ~10% return difference between lowest and highest ESG funds.	Scatter Plot
Q8	**Best Risk-Adjusted Returns**	iShares Edge S&P; 500 Minimum Volatility topped with Sharpe of 15.51. All top funds: Risk Rating 1, US Large-Cap, cost 0.20-0.35%. Low volatility factor consistently outperforms on risk-adjusted basis.	Table Visual
Q9	**Analyst Rated vs Unrated**	Rated funds returned ~11% vs Unrated ~8% — 3% gap confirms analyst coverage adds value. Surprise: Neutral rated funds (~13%) beat Gold (~12%). Negative rated funds worst at ~5%.	Bar Chart

3 Consistent Themes Across All Questions

Low Cost Wins	Q3, Q4, Q8 all confirm — best performing, best risk-adjusted funds consistently cost 0.09-0.35%. Every 1% extra cost meaningfully hurts long term returns.
Analyst Coverage Adds Value	Q9 proves rated funds outperform unrated by 3% annually. Even Bronze rated funds beat unrated. Negative ratings correctly identify poor funds.
ESG Tradeoff is Real	Q6 + Q7 together show ESG funds had lower returns 2015-2020 by excluding high performing sectors. However this may reverse post-2020 as renewables boom.

The Ideal ETF Profile — Based on All 8 Questions

Attribute	Ideal Value	Why
Category	**US Large-Cap Blend Equity or Global Large-Cap Blend**	Most funds, most liquid, consistently strong returns
Cost	**Below 0.35% ongoing cost**	Top performers all cost 0.09-0.35%
Rating	**4-5 Morningstar stars**	All top Q3 funds rated 4-5 stars

Analyst Rating	**Gold, Silver or Neutral**	Avoid Negative — they consistently underperform
Strategy	**Minimum/Low Volatility**	Best risk-adjusted returns in Q8
ESG	**Medium sustainability score**	Very high ESG hurt returns 2015-2020
